**Teva Canada Announces the Launch of a Generic Version of ^{Pr}Abilify[®],
^{Pr}Teva-Aripiprazole Tablets for the treatment of Schizophrenia**

- Currently Available in Canada -

Toronto, Canada (September 10, 2018) – Teva Canada Limited, a subsidiary of Teva Pharmaceutical Industries Ltd., announces that the complete line of ^{Pr}Teva-Aripiprazole (2 mg, 5 mg, 10 mg, 15 mg, 20 mg and 30 mg tablets), a Health Canada approved, bioequivalent generic version of ^{Pr}Abilify[®] (aripiprazole) is now available in Canada. This once-daily extended release prescription medication is indicated for the treatment of schizophrenia in adolescents 15-17 years of age and adults 18 years of age or older.

“Each day, over 300,000ⁱ Canadians living with schizophrenia, their families and caregivers, deal with profound physical, emotional and financial tolls,” said Christine Poulin, Senior Vice President and General Manager, Teva Canada. “The cost of their medication should not be part of the challenge. The launch of ^{Pr}Teva-Aripiprazole provides patients with an affordable, bioequivalent alternative to ^{Pr}Abilify[®] and demonstrates our ongoing commitment to improving people’s lives.”

Aripiprazole tablets (brand: ^{Pr}Abilify[®]) had annual sales of approximately \$182 million in Canada, based on IQVIA sales data as of July 2018. ^{Pr}Teva-Aripiprazole is available immediately to pharmacies across Canada. This launch broadens Teva Canada’s portfolio of medicines that treat mental health conditions to 28, including seven in the same therapeutic class as ^{Pr}Teva-Aripiprazole (antipsychotic), all of which provide patients and payors with a full spectrum of affordable treatment options.

About Schizophrenia

Schizophrenia affects approximately 1% of the population in Canada or 1 in 100 persons. It is a severe mental disorder, characterized by profound disruptions in thinking, affecting language, perception, and the sense of self. It often includes psychotic experiences, such as hearing voices or delusions. It can impair functioning through the loss of an acquired capability to earn a livelihood, or the disruption of studies. Schizophrenia typically begins in late adolescence or early adulthood. Antipsychotic medication forms the cornerstone of treatment for schizophrenia.ⁱⁱ While there is no cure for schizophrenia, medication can reduce symptoms and significantly reduce relapses, and people affected by it can lead a productive life, integrated into society.ⁱⁱⁱ

Helping People Live Better Days

At Teva, we help to improve the health of 200 million people every day by providing innovative treatments and access to the world’s largest medicine cabinet of generic and specialty medicines. This gives us a unique perspective on health. Understanding the many ways health impacts people’s lives inspires us to discover new possibilities to bring medicines and more, enabling patients and caregivers to live better days.
